

Linux LAB-1

Que-5

Question 5 - > Create and manage users/groups using useradd, adduser, passwd, usermod, userdel, groupadd, groupmod, groupdel, groups, id, whoami.

Answer :

User and Group Management

Linux provides commands for creating and managing users and groups. `groupadd` creates a new group, while `useradd` creates a new user account. `passwd` is used to set or change a user's password and `usermod` modifies an existing user's group membership or information. The `id` and `groups` commands display user and group information, while `whoami` displays the current logged-in username. `userdel` and `groupdel` are used to remove users and groups.

Result

A user and group were successfully created, configured, verified using `id`, `groups` and `whoami`, and the test user was removed after completing the demonstration.

```
Ubuntu × + ~
rajat@luffy:/tmp$ whoami
rajat
rajat@luffy:/tmp$ sudo useradd testuser2
rajat@luffy:/tmp$ id testuser2
uid=1002(testuser2) gid=1005(testuser2) groups=1005(testuser2)
rajat@luffy:/tmp$ sudo passwd testuser2
New password:
Retype new password:
passwd: password updated successfully
rajat@luffy:/tmp$ sudo adduser testuser3
New password:
Retype new password:
passwd: password updated successfully
Changing the user information for testuser3
Enter the new value, or press ENTER for the default
    Full Name []:
    Room Number []:
    Work Phone []:
    Home Phone []:
    Other []:
Is the information correct? [Y/n]
rajat@luffy:/tmp$ Y
Y: command not found
rajat@luffy:/tmp$ id testuser3
uid=1006(testuser3) gid=1006(testuser3) groups=1006(testuser3),100(users)
rajat@luffy:/tmp$ sudo groupadd assignmentgroup
rajat@luffy:/tmp$ getent group assignmentgroup
assignmentgroup:x:1007:
