

Linux LAB-1

Que - 6

Question 6 - > Generate a system/directory report using find, du, df, stat, wc, sort, head, tail, uname, hostname, history, free, ps, top with screenshots and summary.

Answer :

User and Group Management

Linux provides commands for creating and managing users and groups. `groupadd` creates a new group, while `useradd` creates a new user account. `passwd` is used to set or change a user's password and `usermod` modifies an existing user's group membership or information. The `id` and `groups` commands display user and group information, while `whoami` displays the current logged-in username. `userdel` and `groupdel` are used to remove users and groups. **Result**

A user and group were successfully created, configured, verified using `id`, `groups` and `whoami`, and the test user was removed after completing the demonstration.
